

# **Duration of antibiotic treatment on resistance emergence in hospital setting**

**10 October 2018**

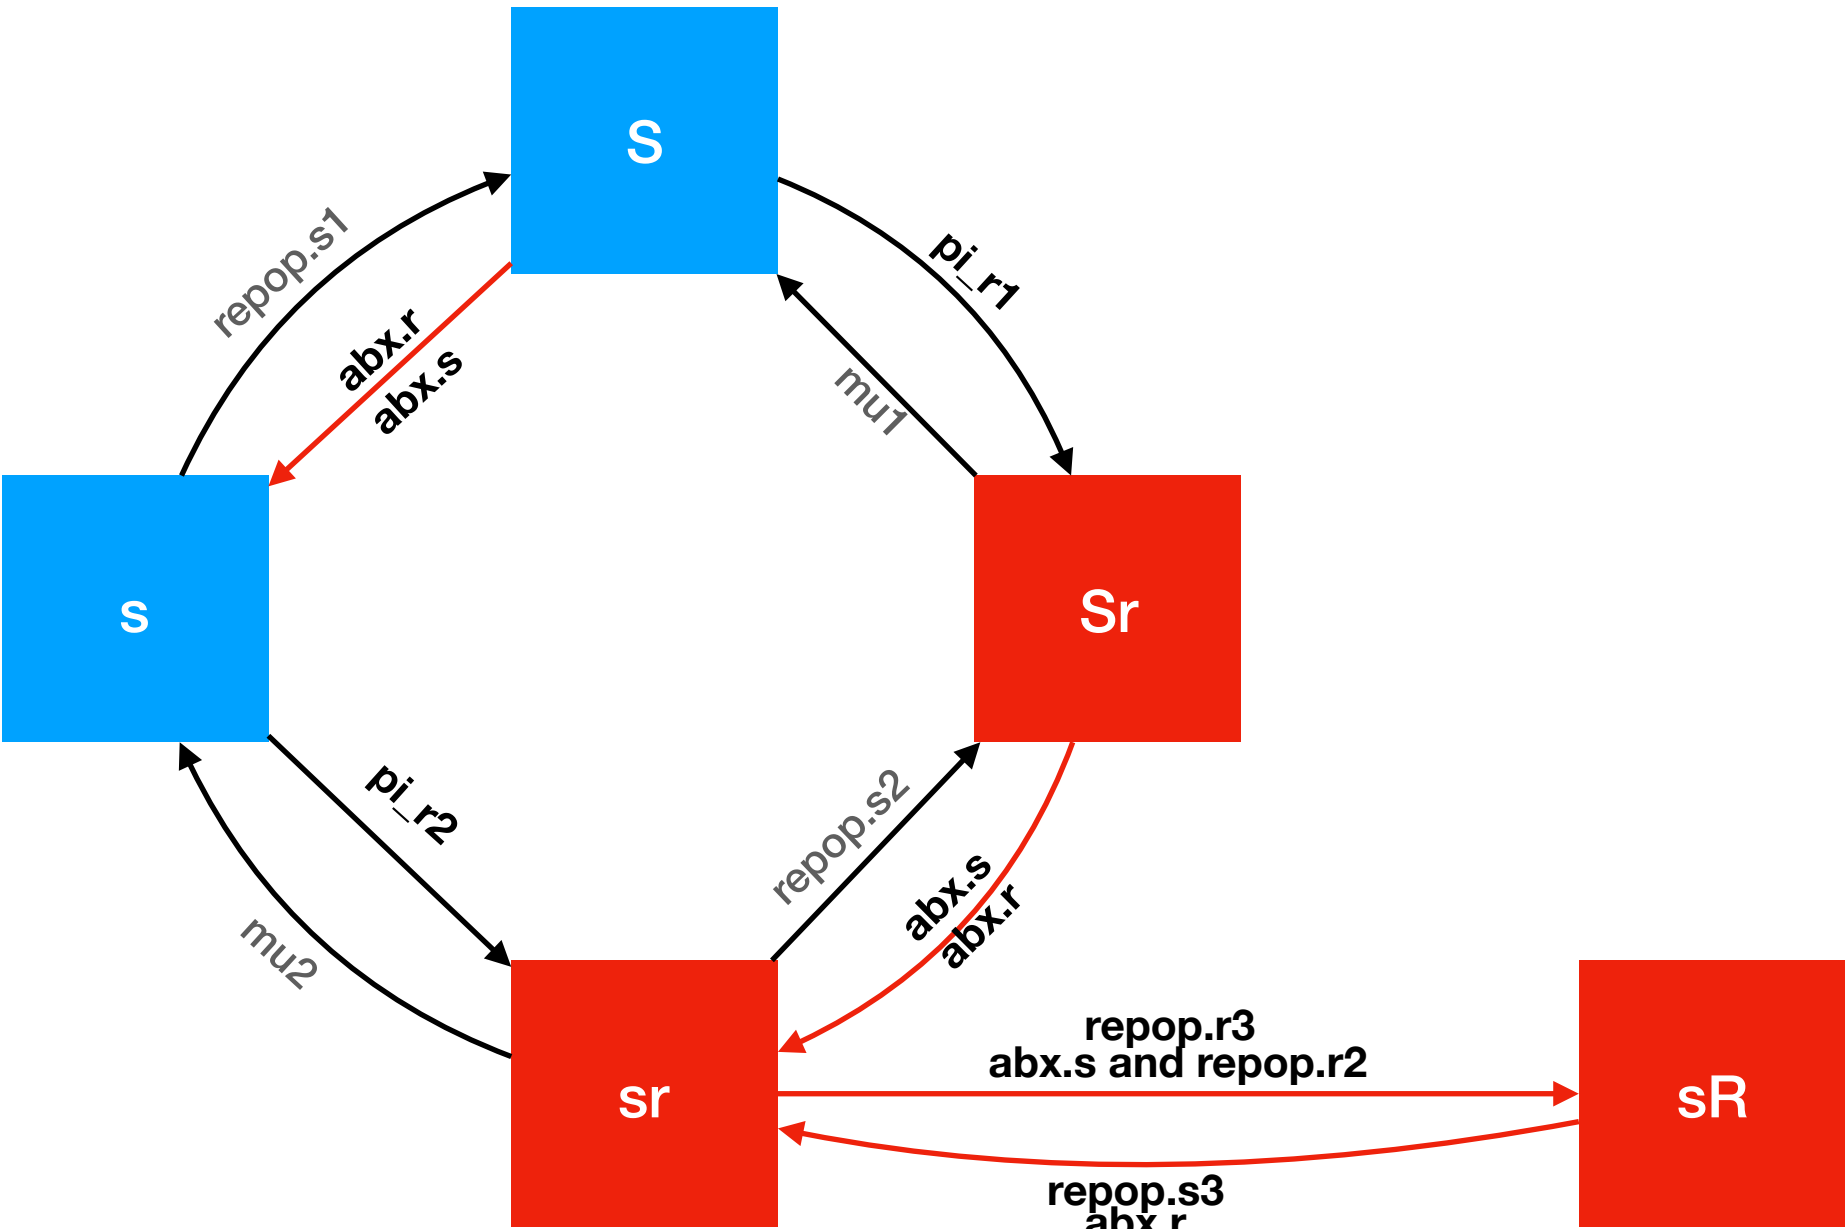

**Ben, Fai, Cherry, Jet, Ana, Patrick, Ricardo, Mo Yin**

# Model 1

Parameters		
abx.s		probability of clearing S to become N
$\pi_s$		probability of regrowth of S
$\pi_r$		probability of being transmitted R
sigma		probability of being decolonised
$\mu_r$		probability of being transmitted R

Model 2

Parameters		Parameters	
p.s	probability of being prescribed narrow spectrum antibiotic	repop.r3	probability of regrowth of s ( $\text{sR} \rightarrow \text{sr}$ )
p.r	probability of being prescribed broad spectrum antibiotic	abx.s	probability of clearing S to become s
$\pi_{r1}$	probability of being transmitted r to S ( $\text{S} \rightarrow \text{Sr}$ )	abs.r	probability of clearing R to become r
$\pi_{r2}$	probability of being transmitted r to s ( $\text{s} \rightarrow \text{sr}$ )	$\mu_1$	probability of being decolonised to S ( $\text{Sr} \rightarrow \text{S}$ )
repop.s1	probability of regrowth of S ( $\text{s} \rightarrow \text{S}$ )	$\mu_2$	probability of being decolonised to S ( $\text{sr} \rightarrow \text{s}$ )
repop.s2	probability of regrowth of S ( $\text{sr} \rightarrow \text{Sr}$ )	bif	bacterial interference factor ( $\pi_{r2} = \pi_{r1} * \text{bif}$ )
repop.s3	probability of transmission of r to S ( $\text{s} \rightarrow \text{Sr}$ )	bif1	bacterial interference factor 1 ( $\text{repop.r3} = \text{repop.r2} * \text{bif1}$ )
repop.r2	probability of transmission of r to S ( $\text{s} \rightarrow \text{Sr}$ )		

	S	s	Sr	sr	sR
S	- (abx.r or abx.s + pi_r1)	abx.r or abx.s	pi_r1	0	0
s	repop.s1	- (repop.s1 + pi_r2)	0	pi_r2	0
Sr	mu1	0	- (abx.r or abx.s + mu1)	abx.r or abx.s	0
sr	0	mu2	repop.s2	-(repop.s2 +repop.r3 or abx.s and repop.r2 )	repop.r3 or abx.s and repop.r2
sR	0	0	0	repop.s3 or abx.r	- (repop.s3 or abx.r)

# Model 2 exploration

Parameters		Values explored	Baseline value
p.s	probability of being prescribed narrow spectrum antibiotic	0.1-0.9	0.4
p.r	probability of being prescribed broad spectrum antibiotic	0.01-0.05	0.05
abx.s	probability of clearing S to become s	0.2-0.9	0.5
abx.r	probability of clearing R to become r	0.2-0.9	0.5
pi_r1	probability of being transmitted r to S ( $S \rightarrow Sr$ )	0.003-0.5	0.003
pi_r2	probability of being transmitted r to s ( $s \rightarrow sr$ )		depends on bif
repop.s1	probability of regrowth of S ( $s \rightarrow S$ )		0
repop.s2	probability of regrowth of S ( $sr \rightarrow Sr$ )		0
repop.s3	probability of transmission of r to S ( $s \rightarrow Sr$ )	0-0.5	0.05
repop.r2	probability of transmission of r to S ( $s \rightarrow Sr$ )	0-0.9	0.5
repop.r3	probability of regrowth of s ( $sR \rightarrow sr$ )		depends on bif1
mu1	probability of being decolonised to S ( $Sr \rightarrow S$ )	0-0.5	0
mu2	probability of being decolonised to S ( $sr \rightarrow s$ )		0
bif	bacterial interference factor ( $pi\_r2 = pi\_r1 * bif$ )	1-500	20
bif1	bacterial interference factor 1 ( $repop.r3 = repop.r2 * bif1$ )	0-1	0.2
n.bed	number of beds		20
mean.max.los	mean of length of stay (normal distribution)		20
n.days	number of days of observation		100
prob_StartBact	probability of initial carriage		S = 0.5, Sr = 0.2, sR=0.1, sr=0.05
mean_dur	mean duration of antibiotics (normal distribution)		4 vs 14

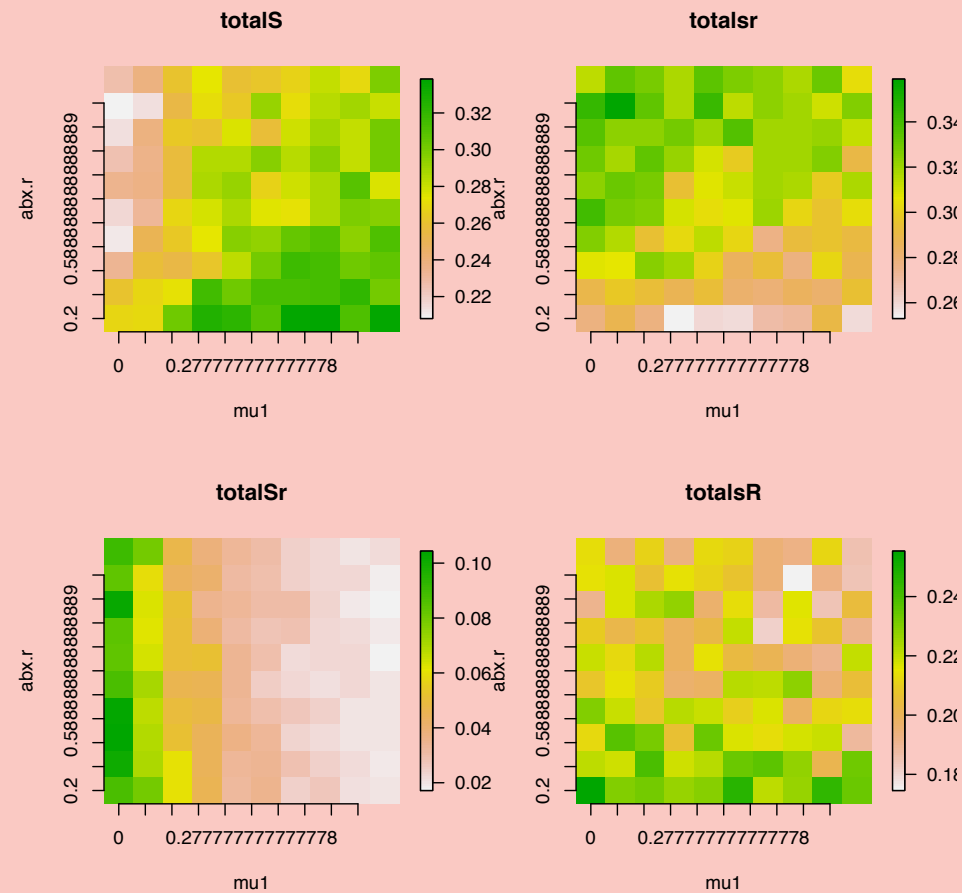

# Model 2 exploration

Pairs of parameters explored to determine the effect of each parameter on resistance

repo.r2 vs repo.s3

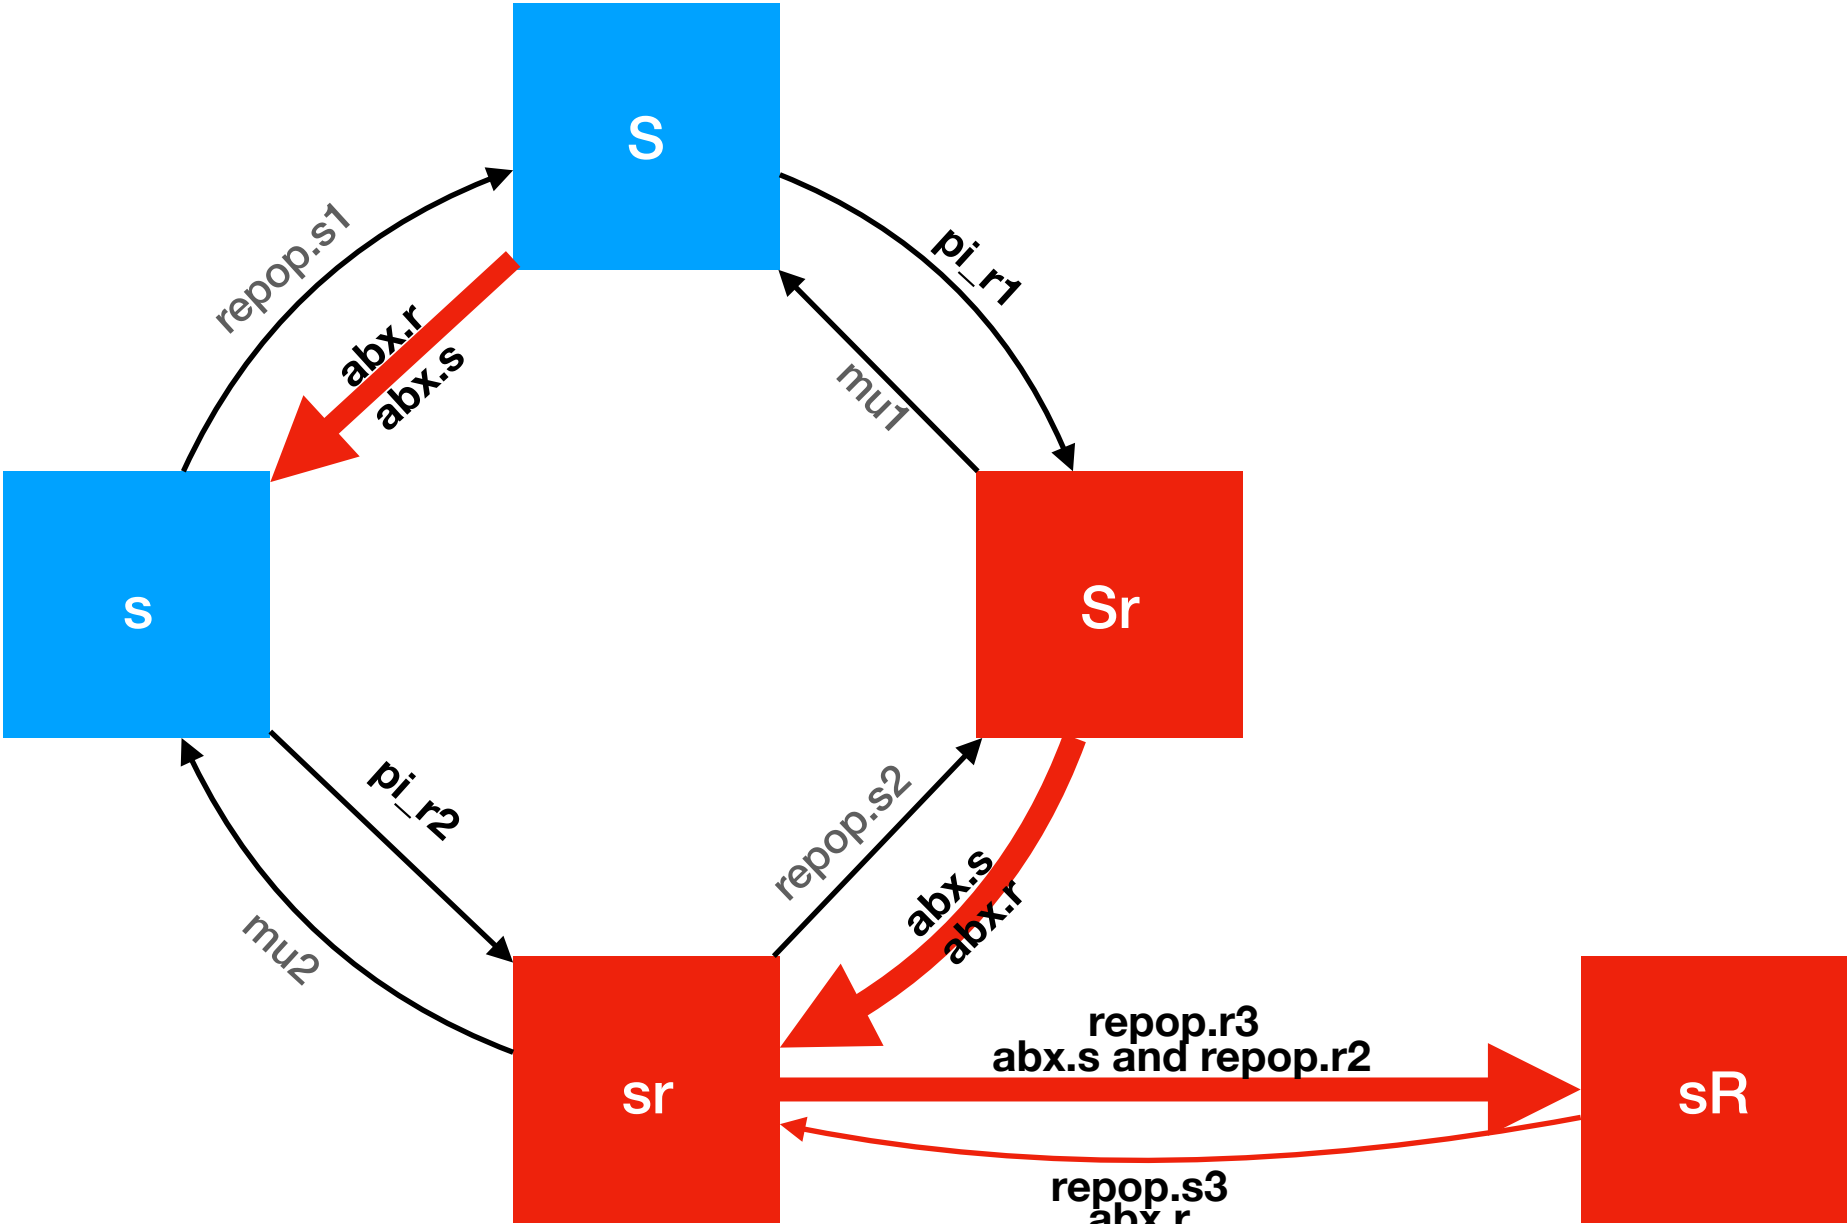

abx.r vs mu1

# Model 2 exploration

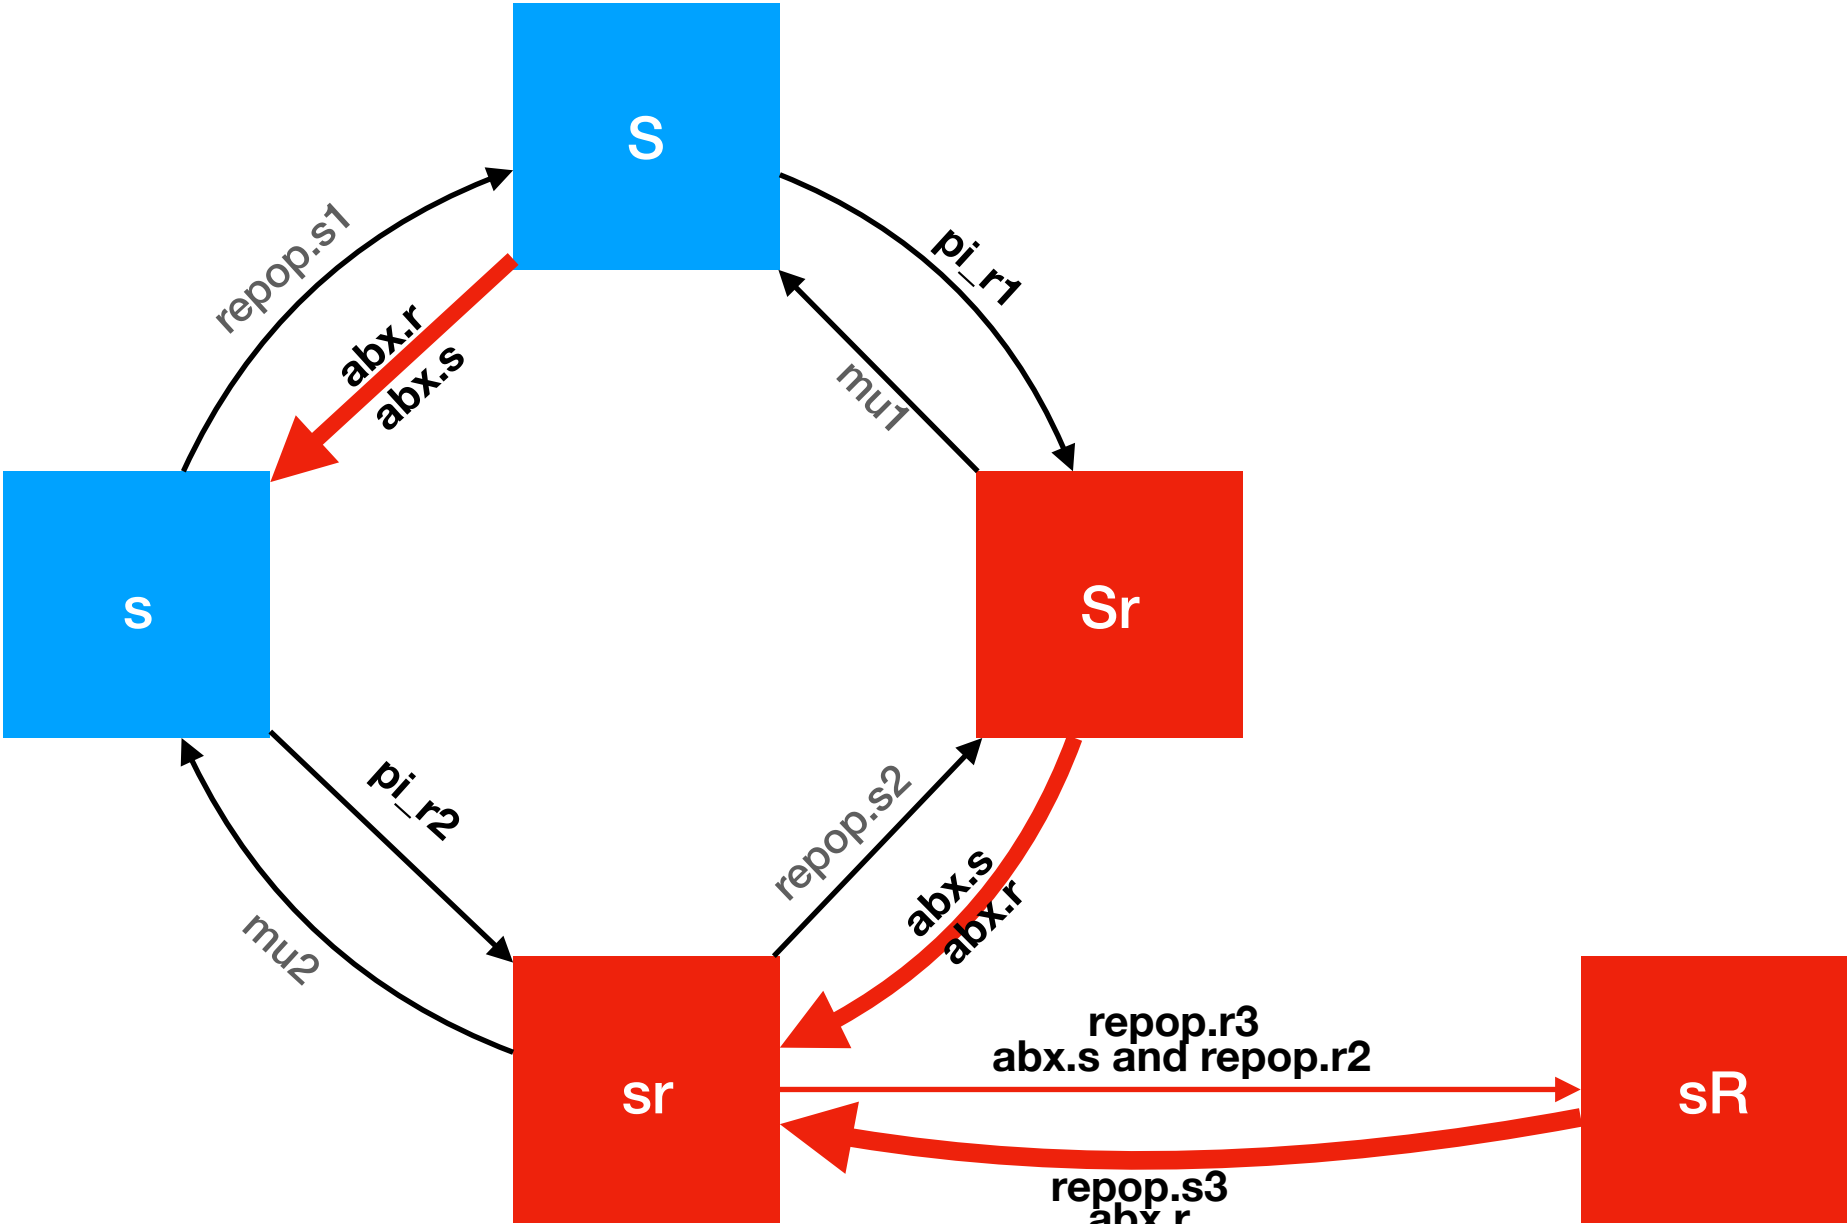

Parameters		Values explored	Baseline value	Increase resistance
p.s	probability of being prescribed narrow spectrum antibiotic	0.1-0.9	0.4	increasing
p.r	probability of being prescribed broad spectrum antibiotic	0.01-0.05	0.05	decreasing
abx.s	probability of clearing S to become s	0.2-0.9	0.5	None
abx.r	probability of clearing R to become r	0.2-0.9	0.5	None
pi_r1	probability of being transmitted r to S ( $S \rightarrow Sr$ )	0.003-0.5	0.003	None
pi_r2	probability of being transmitted r to s ( $s \rightarrow sr$ )	depends on bif		
repop.s1	probability of regrowth of S ( $s \rightarrow S$ )		0	
repop.s2	probability of regrowth of S ( $sr \rightarrow Sr$ )		0	
repop.s3	probability of transmission of r to S ( $s \rightarrow Sr$ )	0-0.5	0.05	decreasing
repop.r2	probability of transmission of r to S ( $s \rightarrow Sr$ )	0-0.9	0.5	increasing
repop.r3	probability of regrowth of s ( $sR \rightarrow sr$ )	depends on bif1		
mu1	probability of being decolonised to S ( $Sr \rightarrow S$ )	0-0.5	0	None
mu2	probability of being decolonised to S ( $sr \rightarrow s$ )		0	
bif	bacterial interference factor ( $pi\_r2 = pi\_r1 * bif$ )	1-500	20	increasing
bif1	bacterial interference factor 1 ( $repop.r3 = repop.r2 * bif1$ )	0-1	0.2	increasing
n.bed	number of beds		20	
mean.max.los	mean of length of stay (normal distribution)		20	
n.days	number of days of observation		100	
prob_StartBact	probability of initial carriage		S = 0.5, Sr = 0.2, sR=0.1, sr=0.05	
mean_dur	mean duration of antibiotics (normal distribution)		4 vs 14	

Increasing p.s

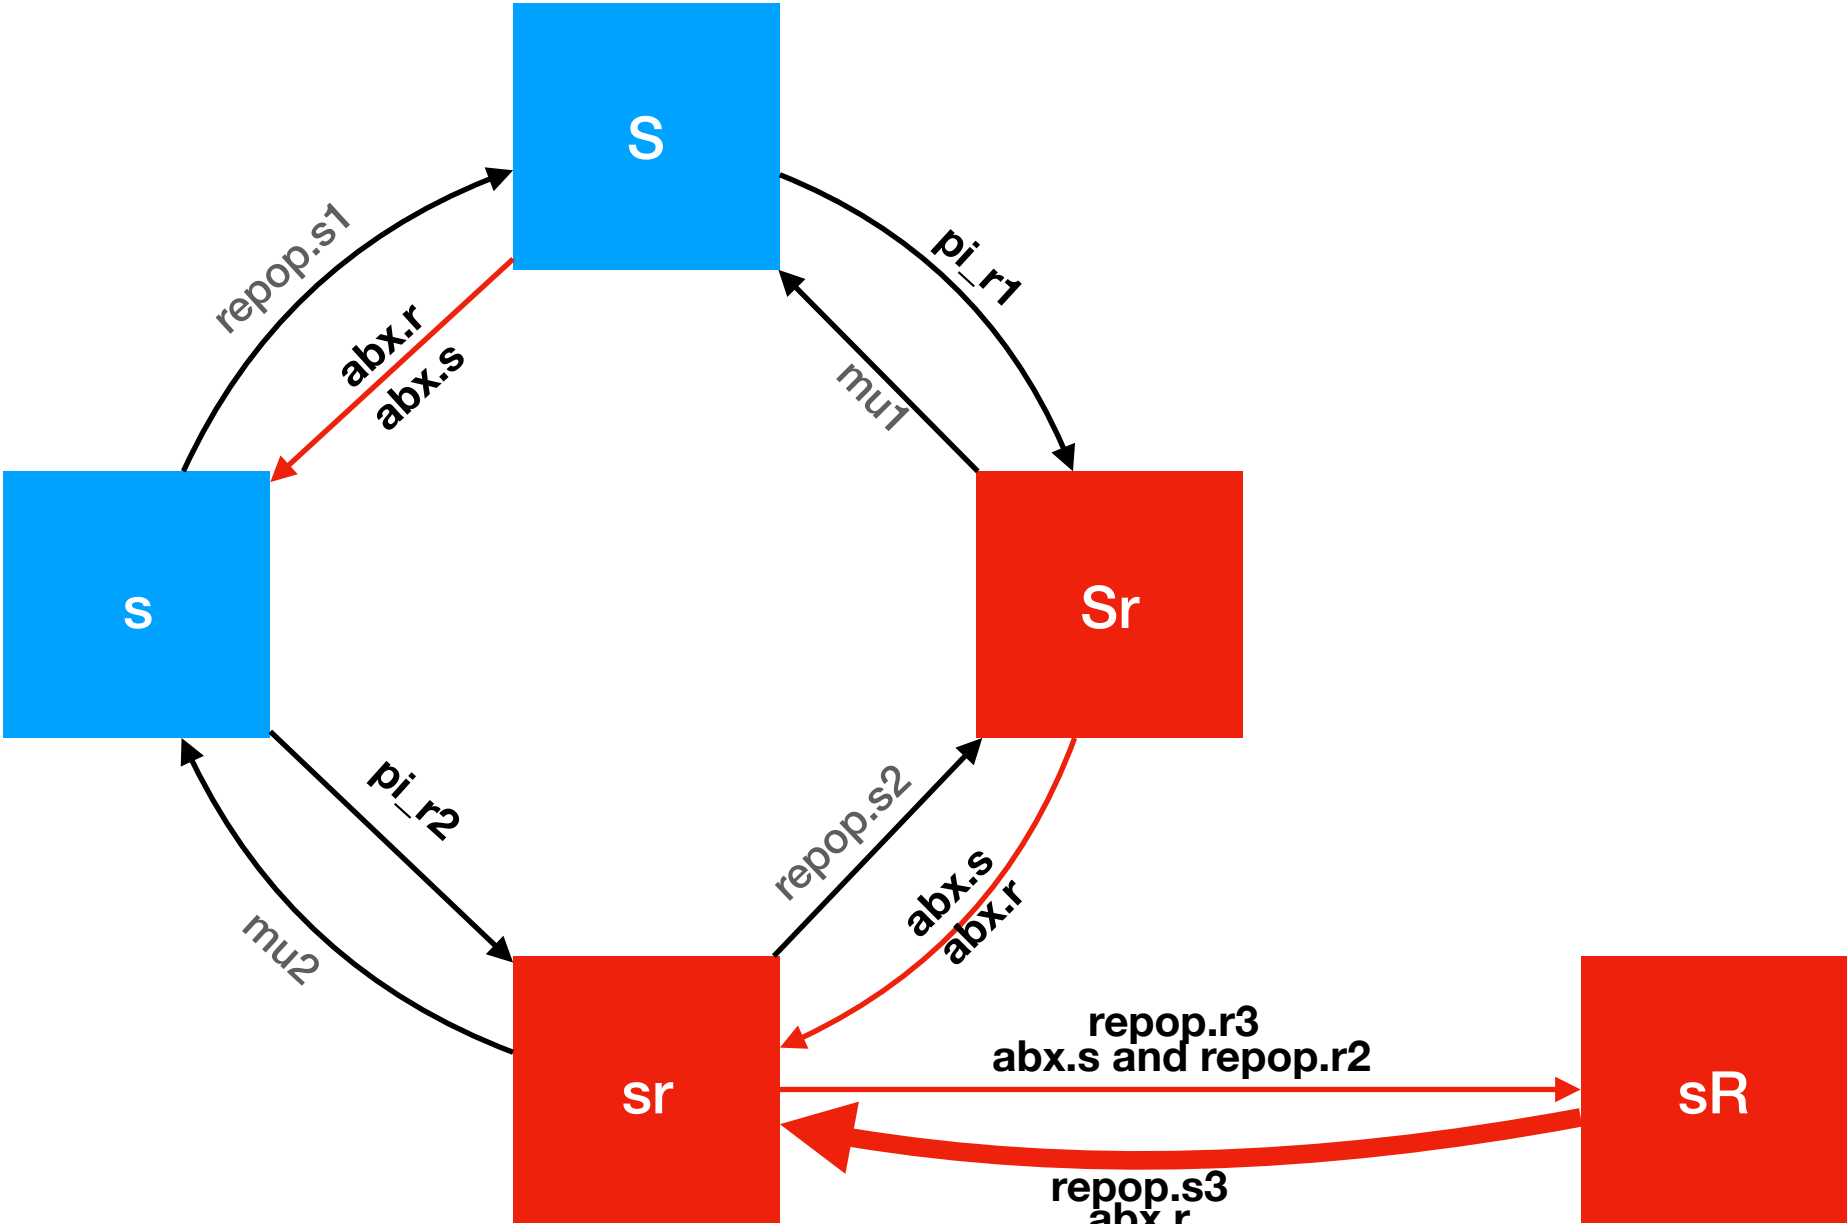

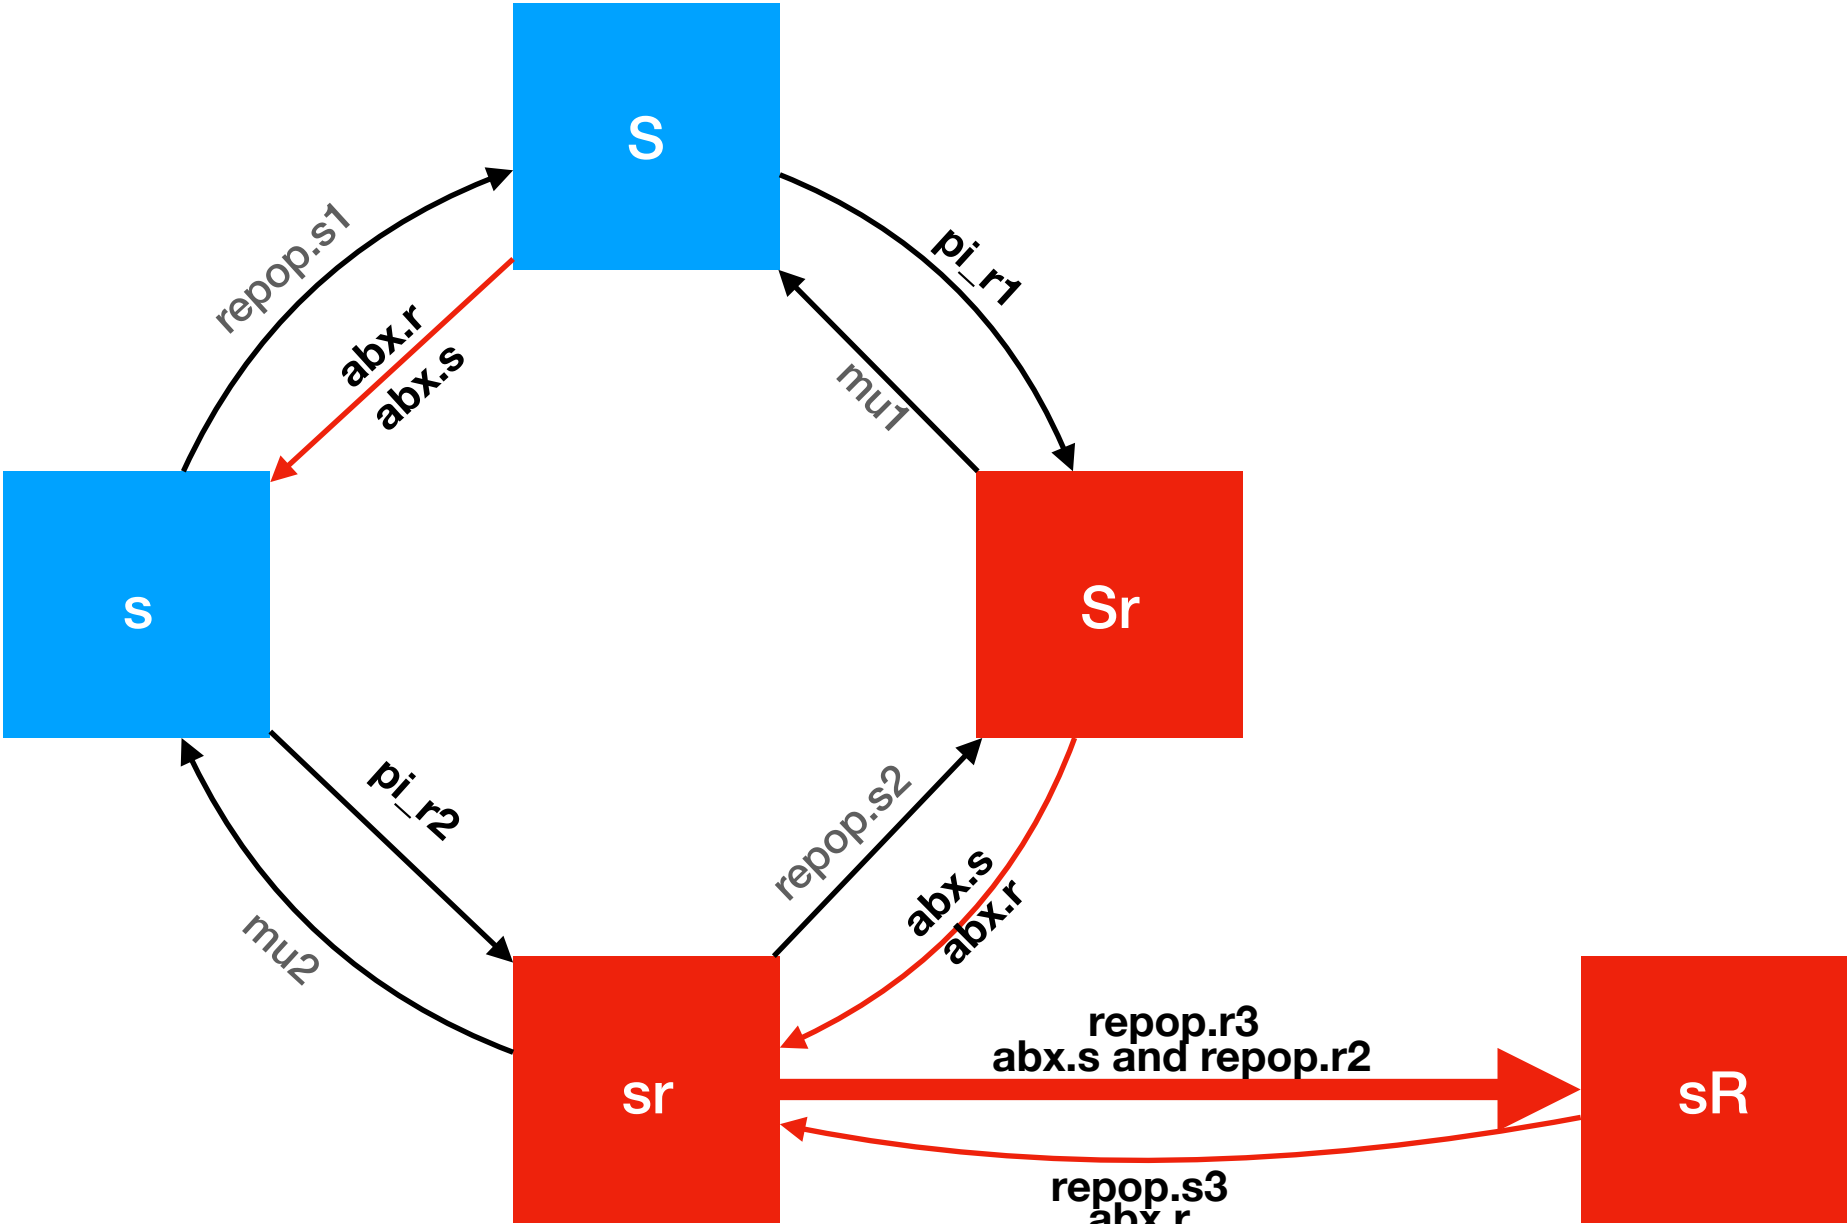

Increasing p.r  
( $p.r \ll p.s$ )

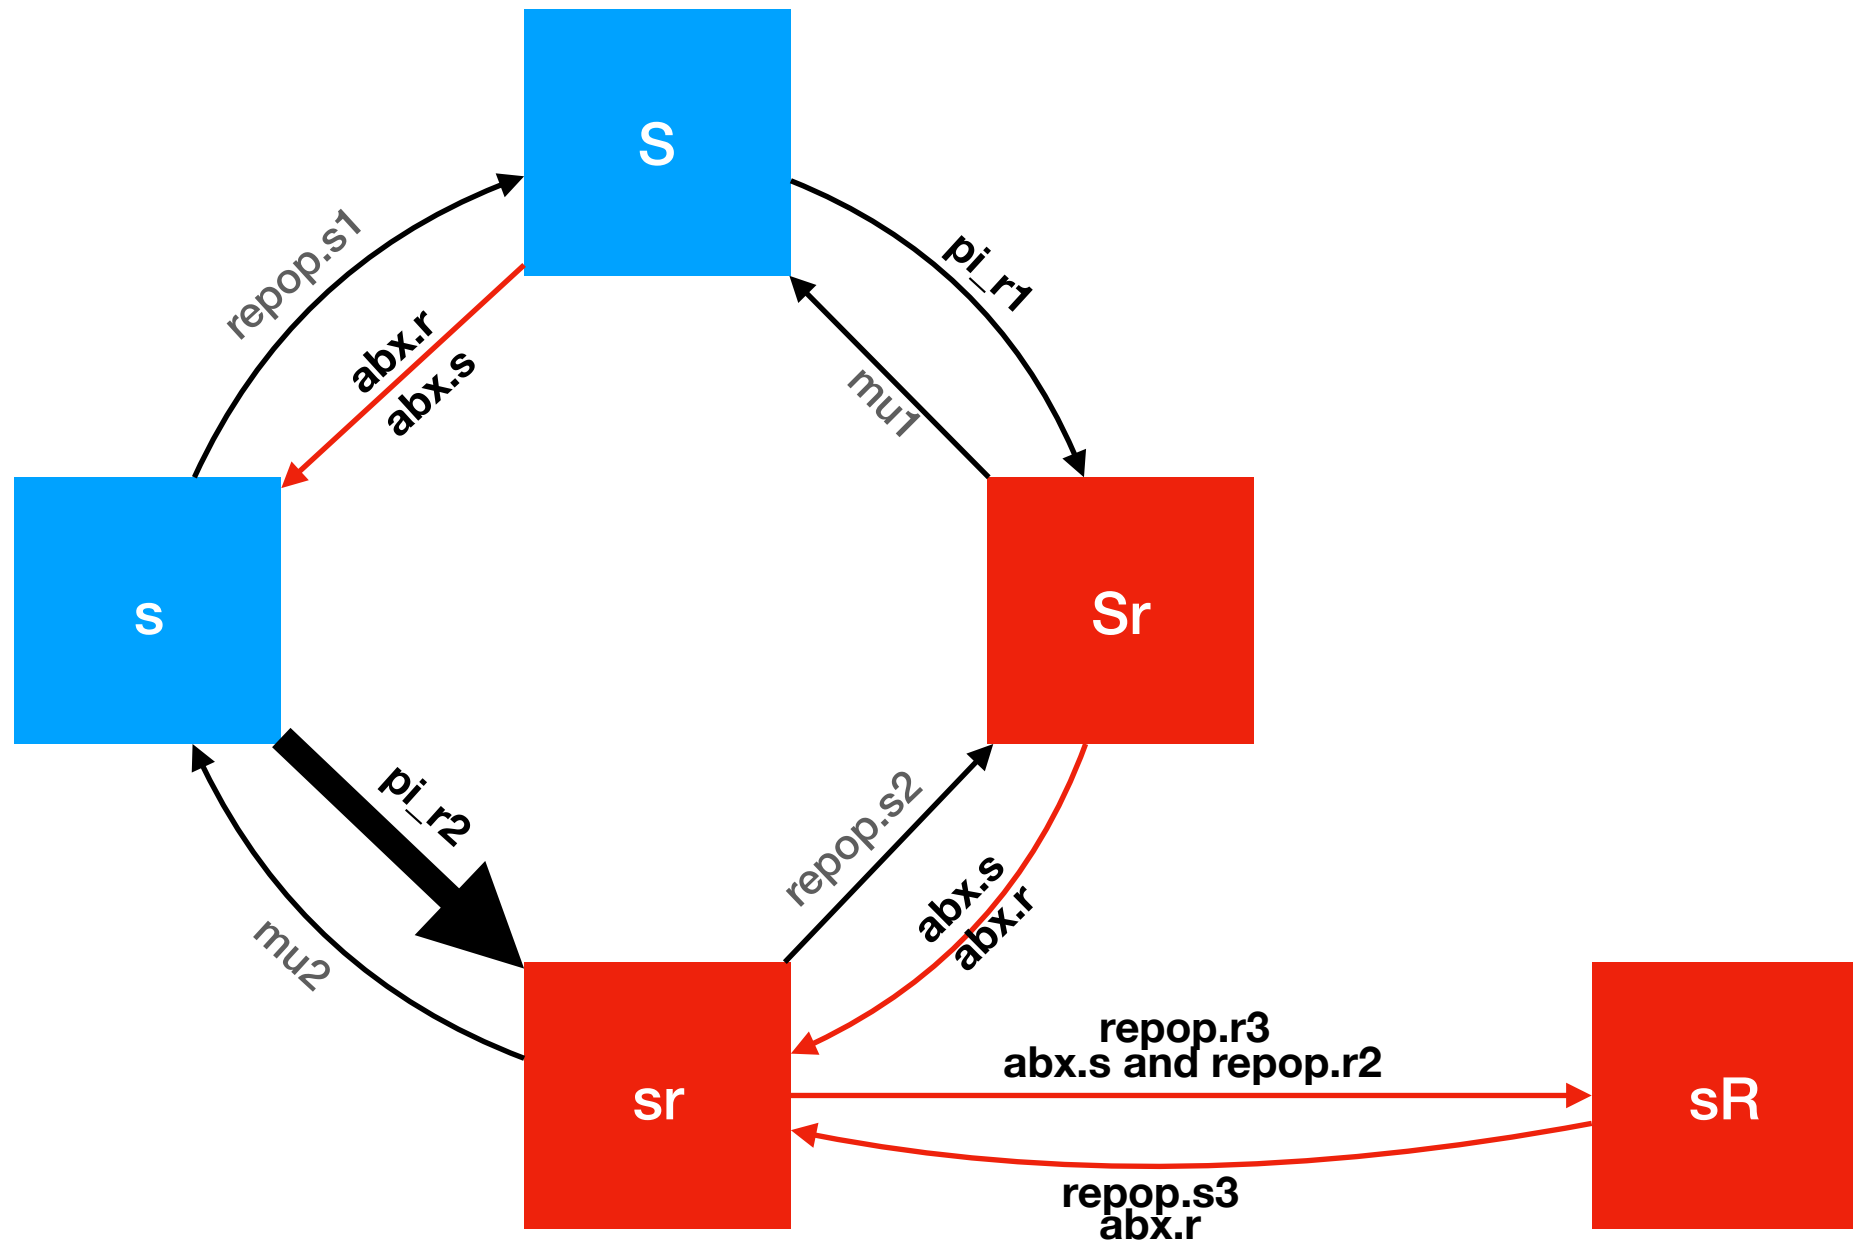

Increasing repop.s3

Increasing repop.r2

Increasing bif

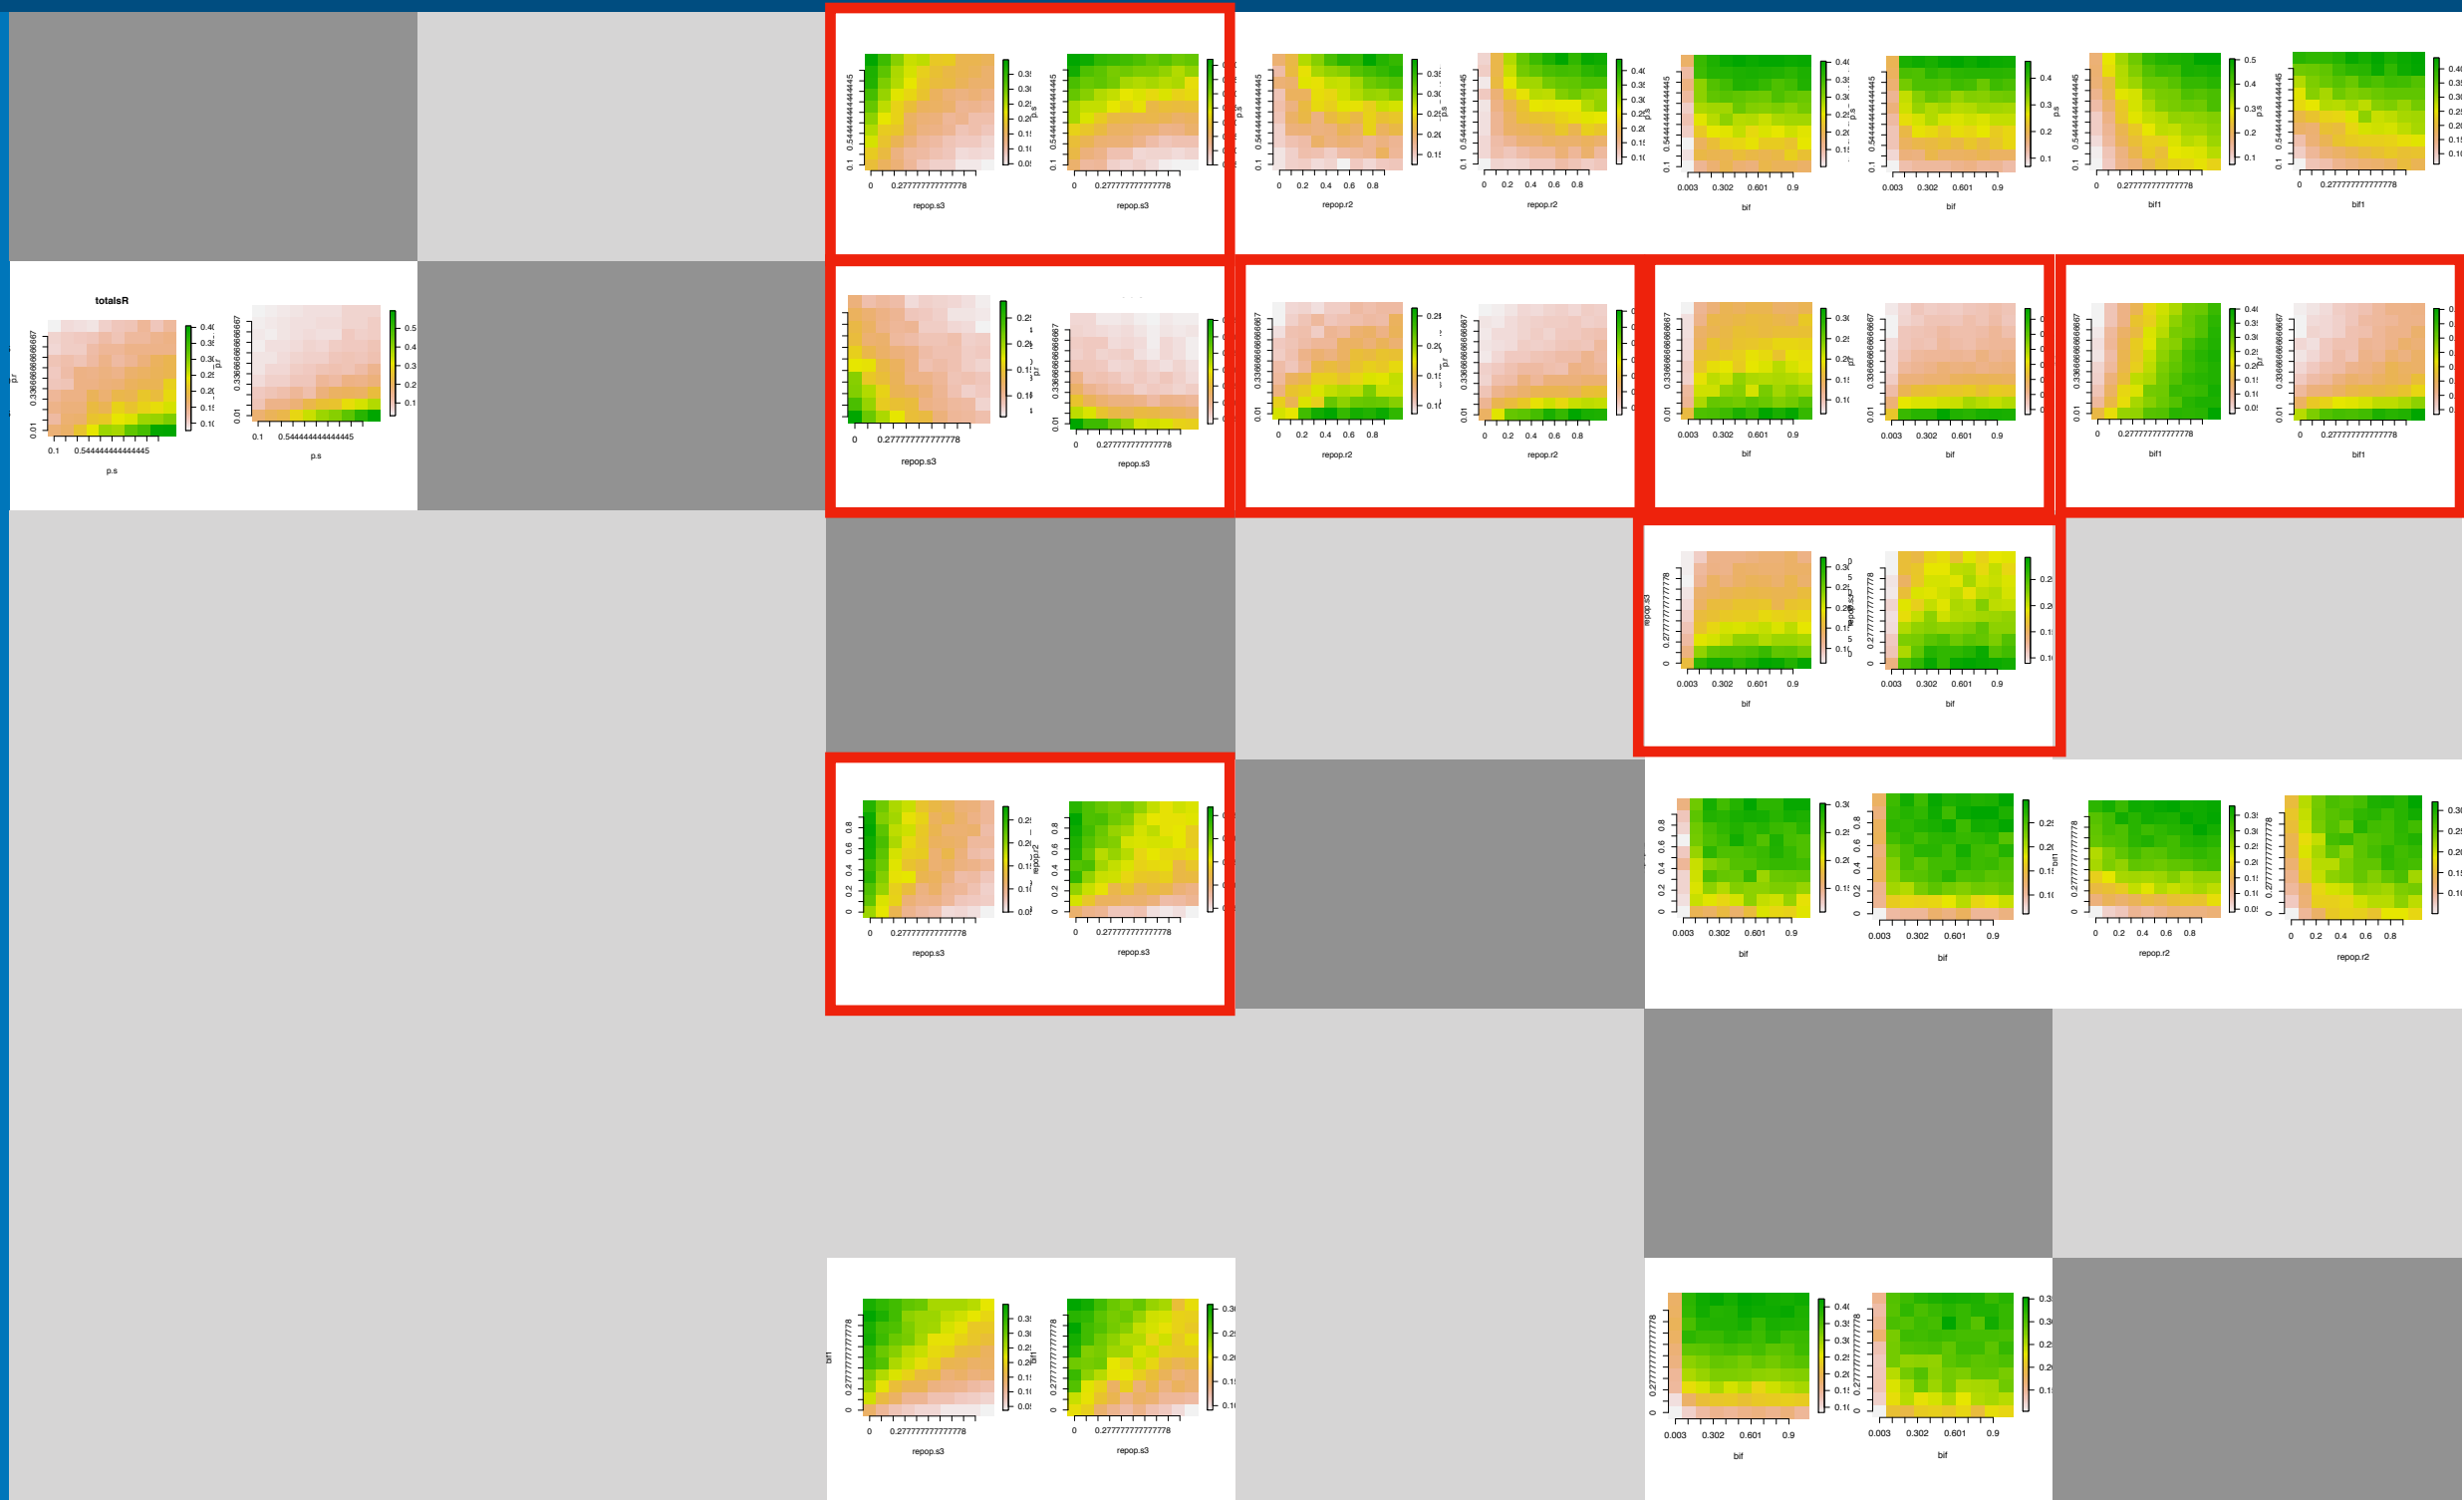

Increasing bif1

bif1
